

How We Can Help

TAD Australia provides *assistive technology* and equipment solutions to help you achieve your goals. Our priority is to support you with solutions that are safe, high quality and appropriate for you.

Assistive Technology (AT) is any device or system that allows you to perform tasks you couldn't otherwise do. Assistive Technology can increase the ease and safety for you to perform tasks.

We have a team of skilled volunteers, therapists and engineers. They work with you to provide solutions that meet your needs.

We may adapt a readily available product to make it more suitable for you. Or the AT could be a customised solution designed and built just for you.

Customised Assistive Technology is built or adapted for you to meet your specific needs. These are items you cannot buy off the shelf. Customised Assistive Technology can help when nothing available is suitable for you.

TAD Australia welcomes all equipment requests. We will work with you to develop a solution as long as it is safe to do so. We can also help you with advice about Assistive Technology that is available from other suppliers.
